1. INTRODUCTION

1.1 Project Overview

- The project aims to develop a system that converts the sign language into a human hearing voice in the desired language to convey a message to normal people, as well as convert speech into understandable sign language for the deaf and dumb.
- We are making use of a convolution neural network to create a model that is trained on different hand gestures. An app is built which uses this model.
- This app enables deaf and dumb people to convey their information using signs which get converted to human-understandable language and speech is given as output.

1.2 Purpose

The Purpose of our Project is

- > The project deals on building an application which helps the specially challenged people to communicate between them and the common people.
- > Communication between a person with hearing/speech impairment and a normal person has always been a challenging task.
- > This application tries to reduce the barrier of communication by developing an assistive application for specially challenged people.

2. LITERATURE SURVEY

2.1 Existing Problem :

- > In our society, we have people with disabilities.
- > The technology is developing day by day but no significant developments are undertaken for the betterment of these people.
- > Communications between deaf-mute and a normal person has always been a challenging task.
- > It is very difficult for mute people to convey their message to normal people. Since normal people are not trained on hand sign language.

2.2 References :

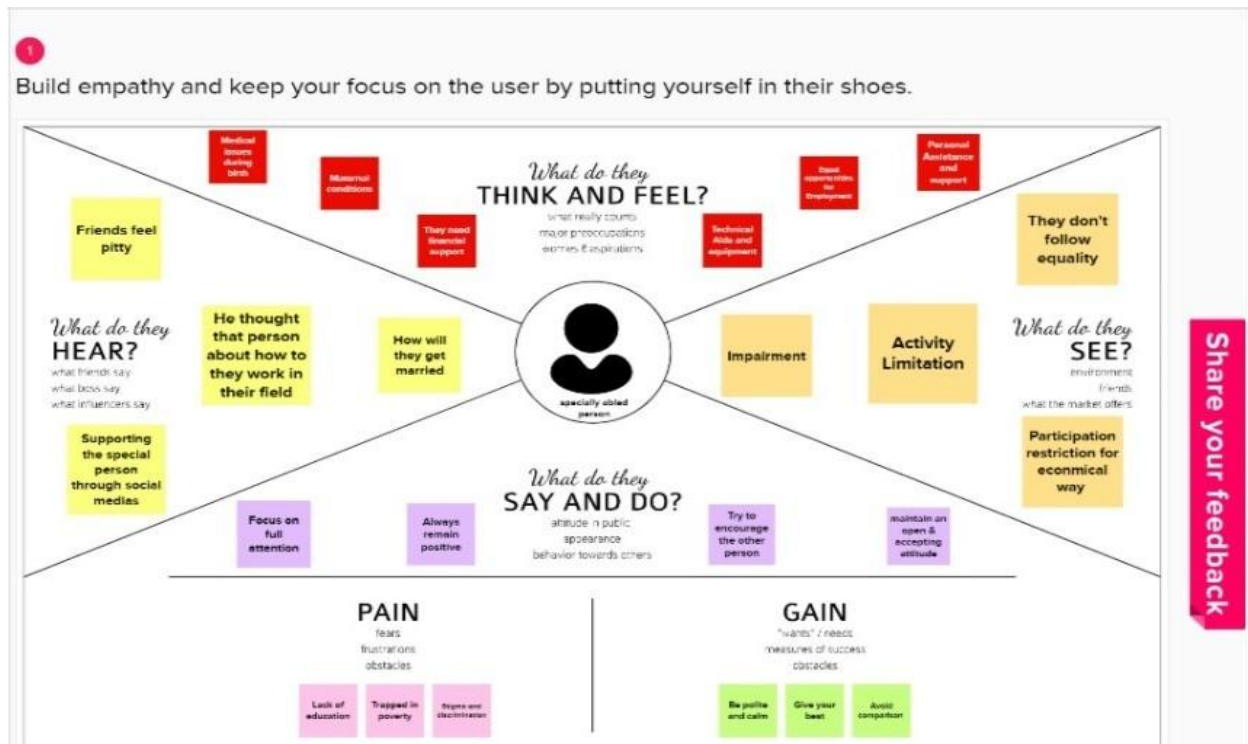

- ☆ https://www.researchgate.net/publication/228618921_A_literature_review_on_artificial_intelligence
- ☆ <https://journals.sagepub.com/doi/full/10.1177/02683962211048201>

2.3 Problem Statement definition :

- > People with disabilities are having a difficult time keeping up with the rapidly evolving technology, which is one of the major issues that our society is dealing with.
- > For those with disabilities, having access to communication tools has become crucial.
- > Typically deaf and stupid people use sign language to communicate, but they struggle to do so with non-sign language users language.
- > Information is the main topic of communication between normal and deaf individuals using sign language which is expressive and natural.
- > So that we can converse with them and comprehend what they're saying, we need a translation. A language translation technology converts common sign language into voice, enabling regular people to communicate with one another.

3. IDEATION & PROPOSED SOLUTION

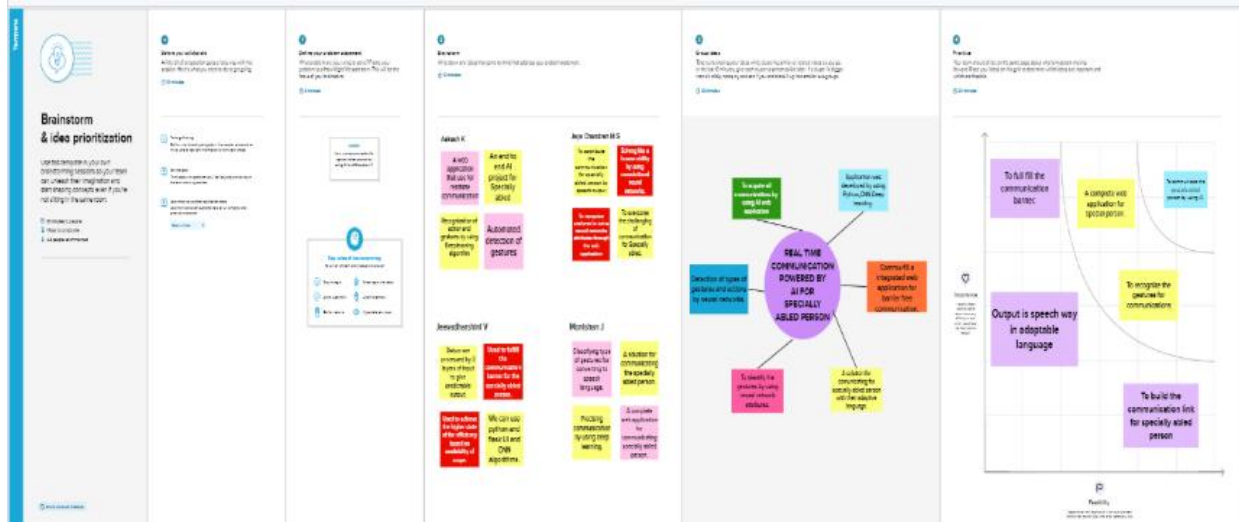

3.1 EMPATHY MAP CANVAS

☆ https://app.mural.co/invitation/mural/realtimecommunicationpowered2234/1666079639406?send_er=u213ba3cfda4b22518119207&key=51fe48f5-c5b8-4348-a041-b7971de518f4

3.3 Proposed Solution

| S.No . | Parameter | Description |
|----------|--|--|
| <u>1</u> | Problem Statement (Problem to be solved) | <ul style="list-style-type: none"> The project aims to develop a system that converts the sign language into a human hearing voice in the desired language to convey a message to normal people, as well as convert speech into understandable sign language for the deaf and dumb. |
| <u>2</u> | Idea / Solution description | <ul style="list-style-type: none"> By using Artificial intelligence to convert hand gestures to speech output. To desire the fulfillment of communication. |

| | | |
|----------|---------------------------------------|--|
| | | |
| <u>3</u> | Novelty / Uniqueness | <ul style="list-style-type: none"> • User friendly UI to access the web application by all the people. • It was access by everyone. |
| <u>4</u> | Social Impact / Customer Satisfaction | <ul style="list-style-type: none"> • It Improves level of the communication. • It will provide the better way to communication. |
| <u>5</u> | Business Model (Revenue Model) | <ul style="list-style-type: none"> • Using the cloud storage, we can easily access the web application. • We can use anytime and anywhere. |
| 6 | Scalability of the Solution | ★ Increasing the scalability of to achieve higher state of efficiency. |

3.4 Problem Solution fit

Project Design Phase - 1 - Problem Solution Fit

Project Title: REAL TIME COMMUNICATION POWERED BY AI
SPECIALLY ABLED PERSON. Team ID: PNT2022TMD32200

| | | |
|--|---|---|
| CUSTOMER SEGMENT: To communicate all the people including specially abled person also. The communication is should be equal to all. | CUSTOMER CONSTRAINT: It has been just working in a web page for communicating people. It convert hand gestures into speech output. | AVAILABLE SOLUTION: When the face the problem like communicating to the specially abled to deaf and dumb. We can rectify this type of issue by using Artificial intelligence. |
| JOBS TO BE DONE/PROBLEM: There is a problem that this type of communication can't fulfill by everyone. | PROBLEM ROOT CAUSE: The major root cause is lack of communication with others. | BEHAVIOUR: There is a feedback procedure in that application improve/clear the bugs and mistakes in the application the communication support. |
| TRIGGERS: By using this app with the efficient and reliable UI to understand by all the people efficiently. EMOTION BEFORE/AFTER: The people were fulfill and satisfied the way of communication. | YOUR SOLUTION: The application/website is used give the better result for communication with high state of efficiency by using AI with CNN, ANN, DL algorithms. | CHANNELS OF BEHAVIOUR: The feedback support is used improve the application as user-friendly by using it in website also by using some browsers. |

4. REQUIREMENT ANALYSIS

4.1 Functional requirement

Functional Requirements:

Following are the functional requirements of the proposed solution.

| FR No. | Functional Requirement (Epic) | Sub Requirement (Story / Sub-Task) |
|---------------|--------------------------------------|--|
| FR-1 | User Registration | Registration through web application Registration through Gmail |
| FR-2 | User Confirmation | Confirmation via Email Confirmation via OTP |
| FR-3 | User uploading data | Through the data set and cloud. |
| FR-4 | User recognition | Through object detection. |
| FR-5 | End user benefits | Getting speech output for specially abled person |

4.2 Non Functional requirements

Non-functional Requirements:

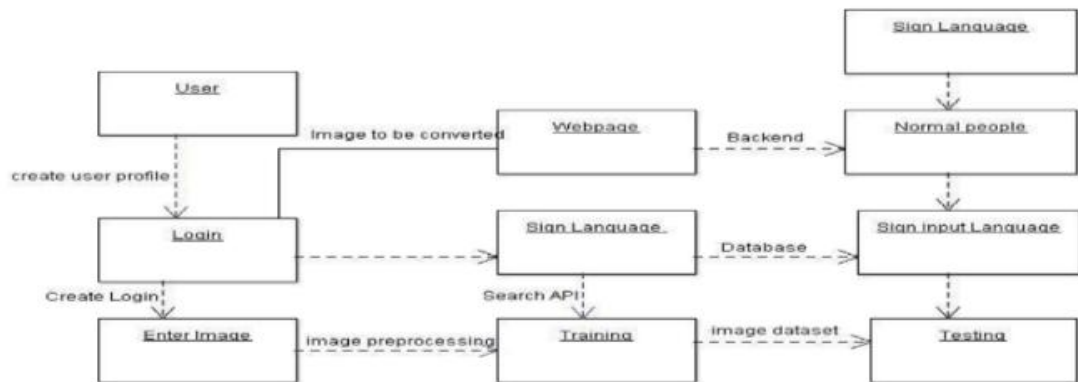

Following are the non-functional requirements of the proposed solution.

| FR No. | Non-Functional Requirement | Description |
|---------------|-----------------------------------|---|
| NFR-1 | Usability | It's a effective way to achieve communication.It can easily access by every one. |
| NFR-2 | Security | It has secured because it has stored in IBM Watson Cloud storage. |
| NFR-3 | Reliability | It has high reliability based on development. |
| NFR-4 | Performance | It has high state of efficiency. |
| NFR-5 | Availability | It has easily available through websites and all platforms |
| NFR-6 | Scalability | It is something that can and should be replicated and adapted to different markets with ease. |

5. PROJECT DESIGN

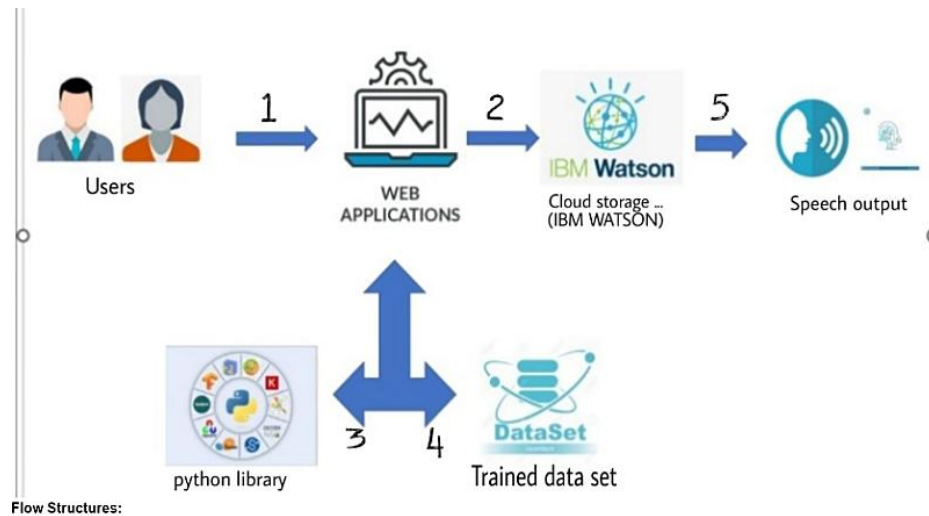

5.1 Data Flow Diagram

Example: Data Flow diagram

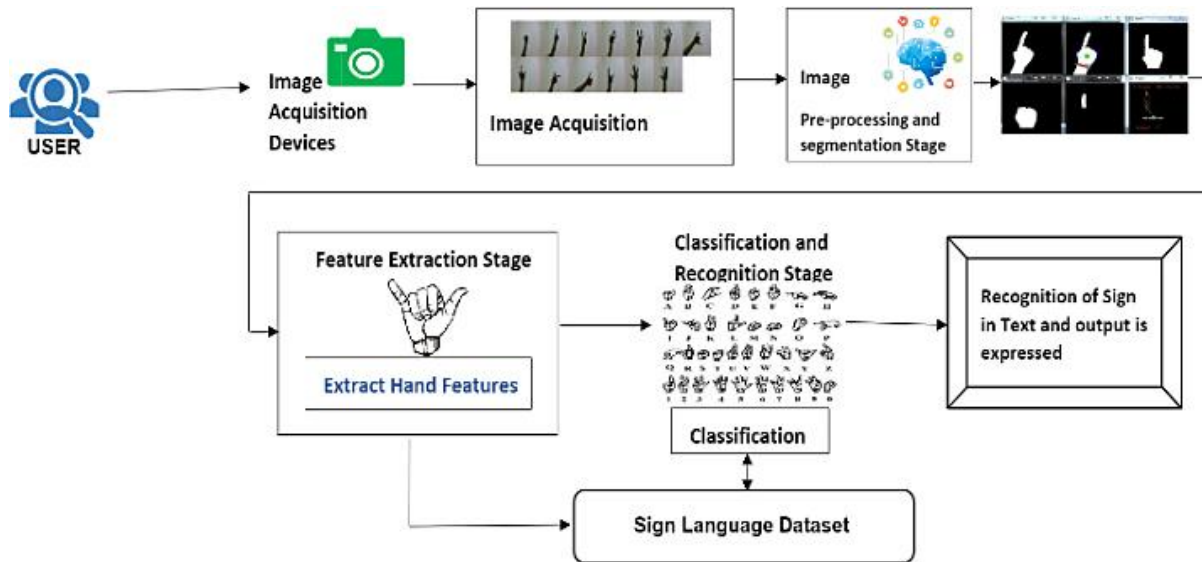

5.2 Solution and Technical Architecture

Solution Architecture:

- Flow Structures:
- 1) User configures credentials and gestures for the Watson Natural Language Understanding service and starts the application.
 - 2) User select data file to process and load.

Technical Architecture:

5.3 User Stories

User Stories

| User Type | Functional Requirement (Epic) | User Story Number | User Story / Task | Acceptance criteria | Priority | Release |
|-------------------------|-------------------------------|-------------------|---|---|----------|----------|
| Customer (Mobile user) | Registration | USN-1 | As a user, I can register for the application by entering my email, password, and confirming my password. | I can access my account / dashboard | High | Sprint-1 |
| | | USN-2 | As a user, I will receive confirmation email once I have registered for the application | I can receive confirmation email & click confirm | High | Sprint-1 |
| | | USN-3 | As a user, I can register for the application through Facebook | I can register & access the dashboard with Facebook Login | Low | Sprint-2 |
| | | USN-4 | As a user, I can register for the application through Gmail | | Medium | Sprint-1 |
| | Login | USN-5 | As a user, I can log into the application by entering email & password | | High | Sprint-1 |
| | Dashboard | | | | | |
| Customer (Web user) | Login | USN-1 | As a user, I can register for the application by entering my email, password, and confirming my password. | I can access my account and dashboard | High | Sprint 1 |
| Customer Care Executive | Chat box | USN-1 | It can be used by easily access and responsible | I can access by easily through application | High | Sprint 2 |
| | Calling | USN-2 | It can be used by easily access and responsible | I can access by easily through application | High | Sprint 2 |
| | Mail | USN -3 | It can be used by easily access and responsible | I can access by easily through application | High | Sprint 1 |

6. PROJECT PLANNING & SCHEDULING

6.1 Sprint Planning & Estimation

| Sprint | Functional Requirement (Epic) | User Story Number | User Story / Task | Story Points | Priority |
|-----------------|-------------------------------|-------------------|---------------------|--------------|----------|
| SPRINT 1 | | | | | |
| Sprint-1 | Data Collection | USN-1 | Collect Dataset | 9 | High |
| Sprint-1 | | USN-2 | Image Preprocessing | 7 | Medium |
| SPRINT 2 | | | | | |

| | | | | | |
|----------|----------------|-------|---|----|--------|
| Sprint-2 | Model Building | USN-3 | Image the required libraries, add the necessary layers and compile the model. | 10 | High |
| Sprint-2 | Dashboard | USN-4 | Training the image classification model using CNN | 8 | Medium |

| SPRINT 3 | | | | | |
|----------|-----------------------------------|-------|--|---|--------|
| Sprint-3 | Training and Testing | USN-5 | Training the model and testing the model's performance | 9 | High |
| SPRINT 4 | | | | | |
| Sprint-4 | Implementation of the application | USN-6 | Converting the input sign language images into English alphabets | 8 | Medium |

6.2 Sprint Delivery Schedule:

| Sprint | Total Story Points | Duration | Sprint Start Date | Sprint End Date (Planned) | Story Points Completed (as on Planned End Date) | Sprint Release Date (Actual) |
|----------|--------------------|----------|-------------------|---------------------------|---|------------------------------|
| Sprint-1 | 20 | 6 Days | 24 Oct 2022 | 04 Nov 2022 | 8 | 29 Oct 2022 |
| Sprint-2 | 20 | 6 Days | 01 Nov 2022 | 08 Nov 2022 | 5 | 05 Nov 2022 |
| Sprint-3 | 20 | 6 Days | 08 Nov 2022 | 12 Nov 2022 | 7 | 12 Nov 2022 |
| Sprint-4 | 20 | 6 Days | 15 Nov 2022 | 16 Nov 2022 | 5 | 18 Nov 2022 |

7. CODING & SOLUTIONING

7.1 Feature 1

Description:

Recognizing the ASL

In feature 1 we have designed a webpage using flask app to recognize the hand gestures to communicate the specially abled person. The first part of this project is interface that interface was designed by html and CSS tools for designing and We have inserted the reference sign letters from ASL (American Sign Language).

HTML code:

```
<!DOCTYPE html>
<html lang="en">

<head>
  <meta charset="utf-8">
  <meta name="viewport" content="width=device-width, initial-scale=1.0, shrink-to-fit=no">
  <title>RTC_VideoTemplate</title>
  <link rel="stylesheet"
href="https://cdn.jsdelivr.net/npm/bootstrap@5.1.3/dist/css/bootstrap.min.css">
  <link rel="stylesheet" href="https://use.fontawesome.com/releases/v5.12.0/css/all.css">

```

We inserted the Quick reference-ASL Alphabets for understanding the sign letters

American Sign Language (ASL) is a complete, natural language that has the same linguistic properties as spoken [languages](#), with grammar that differs from English. ASL is expressed by movements of the hands and face. It is the primary language of many North Americans who are deaf and hard of hearing and is used by some hearing people as well.

7.1 Feature 2

Recognizing the hand gestures to the speech output

- Import necessary packages.
- Initialize models.
- Read frames from a webcam.
- Detect hand keypoints.
- Recognize hand gestures.

Step 1 – Import necessary packages:

To build this Hand Gesture Recognition project, we'll need four packages. So first import these.

import necessary packages for hand gesture recognition project using Python OpenCV

```
import cv2
import numpy as np
import mediapipe as mp
import tensorflow as tf
from tensorflow.keras.models import load_model
```

Step 2 – Initialize models:

```
# initialize mediapipe
mpHands = mp.solutions.hands
hands = mpHands.Hands(max_num_hands=1, min_detection_confidence=0.7)
mpDraw = mp.solutions.drawing_utils
```

Step 3 – Read frames from a webcam:

Initialize the webcam for Hand Gesture Recognition Python project

```
cap = cv2.VideoCapture(0)
```

```
while True:
```

```
    # Read each frame from the webcam
```

```
    _, frame = cap.read()
```

```
    x, y, c = frame.shape
```

```
    # Flip the frame vertically
```

```
    frame = cv2.flip(frame, 1)
```

```
    # Show the final output
```

```
cv2.imshow("Output", frame)
if cv2.waitKey(1) == ord('q'):
    break
```

```
# release the webcam and destroy all active windows
cap.release()
cv2.destroyAllWindows()
```

- We create a VideoCapture object and pass an argument '0'. It is the camera ID of the system. In this case, we have 1 webcam connected with the system. If you have multiple webcams then change the argument according to your camera ID. Otherwise, leave it default.
- The cap.read() function reads each frame from the webcam.
- cv2.flip() function flips the frame.
- cv2.imshow() shows frame on a new openCV window.
- The cv2.waitKey() function keeps the window open until the key 'q' is pressed.

Step 4 – Detect hand keypoints:

```
framergb = cv2.cvtColor(frame, cv2.COLOR_BGR2RGB)
# Get hand landmark prediction
result = hands.process(framergb)
```

```
className = "
```

```
# post process the result
if result.multi_hand_landmarks:
    landmarks = []
    for handslms in result.multi_hand_landmarks:
        for lm in handslms.landmark:
            # print(id, lm)
            lmx = int(lm.x * x)
            lmy = int(lm.y * y)

            landmarks.append([lmx, lmy])
```

Step 5 – Recognize hand gestures:

```
# Predict gesture in Hand Gesture Recognition
projectprediction = model.predict([landmarks])
print(prediction)
classID = np.argmax(prediction)
className = classNames[classID]

# show the prediction on the frame
cv2.putText(frame, className, (10, 50), cv2.FONT_HERSHEY_SIMPLEX,
            1, (0,0,255), 2, cv2.LINE_AA)
```

OUTPUT:

Coding for web application building

Python flask application

from flask import Flask, Response, render_template

```

from camera import Video

app = Flask(__name__)
@app.route('/')
def index():
    return render_template('index.html')

def gen(camera):
    while True:
        frame = camera.get_frame()
        yield(b'--frame\r\n'
               b'Content-Type: image/jpeg\r\n\r\n' + frame +
               b'\r\n\r\n')

@app.route('/video_feed')
def video_feed():
    video = Video()

7.3 DATABASE SCHEMA

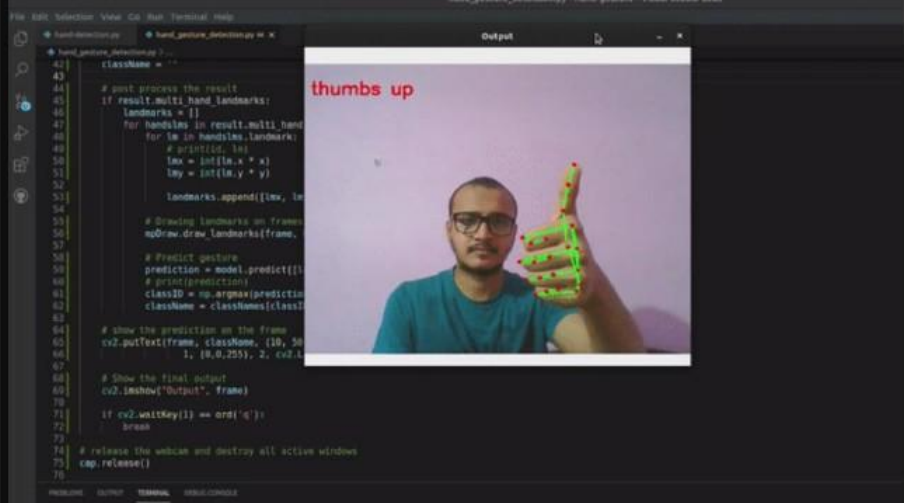

8. Testing

8.1 Testcase

Model Performance Testing:

Project team shall fill the following information in model performance testing template.

| S.No. | Parameter | Values | Screenshot |
|-------|---------------|--------|---|
| 1. | Model Summary | - |  |

| | | | |
|----|----------|--|--|
| 2. | Accuracy | Training Accuracy - 85 Validation Accuracy - 80 |  |
|----|----------|--|--|

8.2 User Acceptance Testing

1. Purpose of Document

The purpose of this document is to briefly explain the test coverage and open issues of the [ProductName] project at the time of the release to User Acceptance Testing (UAT).

2. Defect Analysis

This report shows the number of resolved or closed bugs at each severity level, and how

| Section | Total Cases | Not Tested | Fail | Pass |
|--------------------|-------------|------------|------|------|
| Print Engine | 7 | 0 | 02 | 5 |
| Client Application | 51 | 7 | 8 | 46 |
| Security | 2 | 0 | 0 | 2 |
| Outsource Shipping | 3 | 01 | 0 | 2 |

The defect analysis was resolved by,

1. Reviewing the code and establishing checkpoints.
2. Debugging window.
3. By working in pairs and conducting team window.
4. By developing action plans to cope with specific issues.
5. Defect resolution process.
6. Prioritize and resolving defect.
7. Validating the corrective action presented.

| Resolution | Severity 1 | Severity 2 | Severity 3 | Severity 4 | Subtotal |
|----------------|------------|------------|------------|------------|----------|
| By Design | 10 | 4 | 2 | 3 | 20 |
| Duplicate | 1 | 0 | 3 | 0 | 4 |
| External | 2 | 3 | 0 | 1 | 6 |
| Fixed | 9 | 2 | 4 | 10 | 37 |
| Not Reproduced | 0 | 0 | 1 | 0 | 1 |
| Skipped | 0 | 0 | 0 | 1 | 2 |
| Won't Fix | 0 | 7 | 0 | 1 | 8 |
| Totals | 22 | 12 | 10 | 16 | 60 |

9. RESULTS

9.1 Performance Metrics

Software quality is a measurement of something intangible, “how good” a software product really is. Some of the aspects of software quality taken are

- a. Scalability
- b. Speed
- c. Stability
- d. Reliability
- e. Security
- f. Maintainability and code quality

LOAD TEST

| | |
|---------------------------|---|
| Scenario Name | Load Test – Real time communication powered by AI for specially abled |
| Scenario Type | Load Test – Duration 1 hour |
| Scenario Objective | To Simulate the peak load and to monitor the performance of the Website |
| Steps | The online load will be maintained at steady state |

| | |
|-----------------------|--|
| Entry Criteria | All the monitors are in ready state |
| Exit Criteria | Response met the criteria and test completion report is agreed |

STRESS TEST

| | |
|---------------------------|--|
| Scenario Name | Stress Test - Ral time communication powered by AI for specially abled |
| Scenario Type | Stress Test |
| Scenario Objective | Objective is to verify that the application can handle the projected growth and to discover the breaking point |
| Steps | Ramp up to 95% of peak volume and continuously increase load until breaking point |
| Entry Criteria | All the monitors are in place Test Data is set up Peak load test completed successfully |
| Exit Criteria | Test completion report is agreed upon as per expectation |

ENDURANCE & SOAK TEST

| | |
|---------------------------|---|
| Scenario Name | Soak Test –Ral time communication powered by AI for specially abled |
| Scenario Type | Endurance – Duration 8 hours |
| Scenario Objective | To discover memory issues and bottlenecks that might occur under daily usage of the application |
| Steps | Steady state is maintained for 8 hours with half of the peak load |
| Entry Criteria | All the monitors are in place Test Data is set up Peak load test completed successfully |
| Exit Criteria | Test completion report is agreed upon as per expectation |

Execution results:

The Predicted Alphabet is: C

[Quick Reference - ASL Alphabets](#)

About The Project

Artificial Intelligence has made it possible to handle our daily activities in new and simpler ways. With the ability to automate tasks that normally require human intelligence, such as speech and voice recognition, visual perception, predictive text functionality, decision-making, and a variety of other tasks, AI can assist people with disabilities by significantly improving their ability to get around and participate in daily activities.

Currently, Sign Recognition is available **only for alphabets A-I** and not for J-Z, since J-Z alphabets also require Gesture Recognition for them to be able to be predicted correctly to a certain degree of accuracy.

Developed By

The Predicted Alphabet is: F

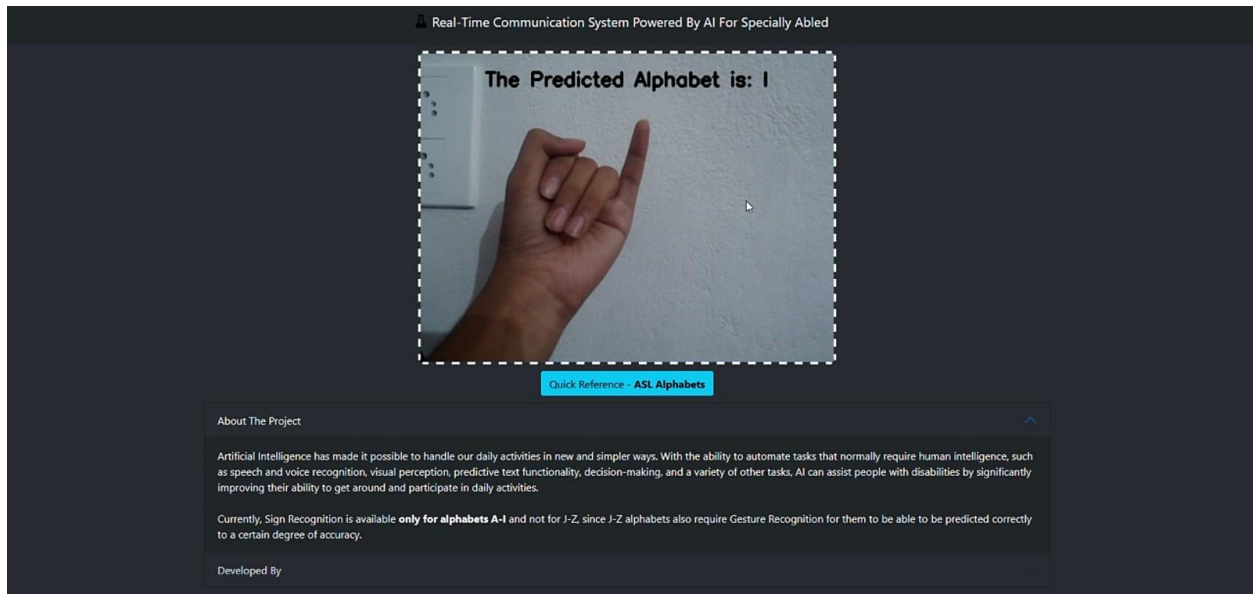

[Quick Reference - ASL Alphabets](#)

About The Project

Artificial Intelligence has made it possible to handle our daily activities in new and simpler ways. With the ability to automate tasks that normally require human intelligence, such as speech and voice recognition, visual perception, predictive text functionality, decision-making, and a variety of other tasks, AI can assist people with disabilities by significantly improving their ability to get around and participate in daily activities.

Currently, Sign Recognition is available **only for alphabets A-I** and not for J-Z, since J-Z alphabets also require Gesture Recognition for them to be able to be predicted correctly to a certain degree of accuracy.

Developed By

10. ADVANTAGES & DISADVANTAGES

Advantages:

1. It is possible to create a mobile application to bridge the communication gap between deaf and dumb persons and the general public.
2. As different sign language standards exist, their dataset can be added, and the user can choose which sign language to read.
4. Removing the communication barrier between the normal and abnormal people
5. Easy sign gesture converter to speech.

Disadvantages:

1. The current model only works from limited gestures.
2. In absence of sufficient gesture recognition cannot be identified as they require some kind of gesture input from the user.
3. As the quantity/quality of images in the dataset is low, the accuracy is not great, but that can easily be improved by change in dataset.

APPLICATIONS

1. It will contribute to the development of improved communication for the deafened. The majority of people are unable to communicate via sign language, which creates a barrier to communication.

2. As a result, others will be able to learn and comprehend sign language and communicate with the deaf and dumb via the web app.
3. According to scientific research, learning sign language improves cognitive abilities, attention span, and creativity.

11. CONCLUSION

Sign language is a useful tool for facilitating communication between deaf and hearing people. Because it allows for two-way communication, the system aims to bridge the communication gap between deaf people and the rest of society. The proposed methodology translates language into English alphabets that are understandable to humans.

This system sends hand gestures to the model, who recognises them and displays the equivalent Alphabet on the screen. Deaf-mute people can use their hands to perform sign language, which will then be converted into alphabets, thanks to this project.

12. FUTURE SCOPE

Having a technology that can translate hand sign language to its corresponding alphabet is a game changer in the field of communication and Ai for the specially abled people such as deaf and dumb. With introduction of gesture recognition, the web app can easily be expanded to recognize letters beyond 'T', digits and other symbols plus gesture recognition can also allow controlling of software/hardware interfaces.

We can develop the speech output to adaptive region of language.
